

Expressing Date (WSID 109)

Expressing Date is an extension to [Expressing Time](#). It has a [WSID](#) of 109.

Expressing Date

In Expressing Date, the hands start from a square. The big arrow shows the month (fig. 1) and the small one (with the arrow on its end) shows how much times 7 to add to the date (fig. 2). You add up to 6 dots for the rest of the days.

Expressing Time (WSID 108)

This is a script by a deleted reddit user on [r/neography](#). ([WSID](#) 108). You can find the original post [here](#). You express a clockhand's position by directly drawing it if it's up, down, left or right. If it's diagonal, you draw it at 45° and put a small line towards the correct direction.

You should draw the hour hand smaller than the minute hand, like on a real clock. You add dots, because the minutes are rounded down. You add ^ for PM and v for AM.

01:02 P.M. **12:09 A.M.**
